The MNE Software Vision

- State-of-the-art methods, documented and tested
- Open development: collaboration between several centers
- Share the best practices, promote reproducible research

Software Features

Preprocessing

- Review raw data, filter, correct ECG / EOG with SSPs, ICA

Forward & inverse modeling

- FreeSurfer structural data: Automatic forward modeling
- MNE – dSPM – sLORETA – (TF-)MxNE – LCMV – DICS

Statistics (sensor and source spaces)

- Time-Frequency (Phase-Locking, Induced Power)
- Parametric and non-parametric stats, with clustering
- Decoding/MVPA (SVM, ...)

Connectivity (sensor and source spaces)

- Functional and effective connectivity measures

The MNE Software Family
MNE-C – MNE-Matlab – MNE-Python

MNE-Python

- Python: general-purpose, high-level language
- Free: can run on a cluster without license problems
- Permissive BSD license: allows use in commercial products
- 46 contributors in last 12 months ≈ 13 person-years of effort
