### The MNE Software Vision

- ■State-of-the-art methods, documented and tested
- Open development: collaboration between several centers
- ■Share the best practices, promote reproducible research

#### **Software Features**

#### **Preprocessing**

- Review raw data, filter, correct ECG / EOG with SSPs, ICA Forward & inverse modeling
- FreeSurfer structural data: Automatic forward modeling
- ■MNE dSPM sLORETA (TF-)M×NE LCMV DICS

#### Statistics (sensor and source spaces)

- Time-Frequency (Phase-Locking, Induced Power)
- Parametric and non-parametric stats, with clustering
- Decoding/MVPA (SVM, ...)
- **Connectivity** (sensor and source spaces)
- Functional and effective connectivity measures

#### MNE-Python

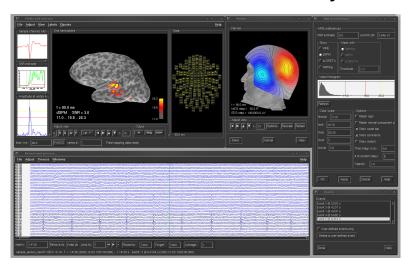

- ■Python: general-purpose, high-level language
- Free: can run on a cluster without license problems
- Permissive BSD license: allows use in commercial products
